Fadi Jerji (S'18, M'23) Holds a PhD degree in Electrical and Computer Engineering from Mackenzie Presbyterian University (2023), a Master's degree in Electrical and Computer Engineering with distinction and honors from Mackenzie Presbyterian University (2019), and a Bachelor's degree in Electrical Engineering, with an emphasis on Computer Engineering and Automation from Homs University, Syria (2010), validated by the Federal University of Rio de Janeiro (Electronic and Computer Engineering) (2017). He was a professor in the Electrical Engineering course at Mackenzie Presbyterian University (2019-2021). He currently participates in projects carried out by the Digital TV Laboratory at Mackenzie Presbyterian University. His research interests include artificial intelligence and advanced digital communications, including evolutionary computing, artificial neural networks, machine learning, channel coding and error correction codes, time and frequency synchronization techniques, channel estimation, and modulation techniques' optimization. In these areas, he has published scientific articles in major international conferences and specialized journals. He has experience in the field of Electrical Engineering, with an emphasis on embedded systems, computer architecture, parallel computing, reconfigurable logic, digital communication, computer networks, software-defined radio, and industrial automation.
